

Fullstack coding challenge

Invest 4-8h of your time. You're welcome to use any framework of your choosing. Your implementation doesn't need to be perfect & finished, the main goal is to have a base to discuss on. Ideally provide us a GitHub link to your solution.

Required features

- Backend: Create a microservice with a REST API for searching Nodes (search term + tags).

Example of a Node:

- Frontend: Use API to search nodes

Optional: Add more functionality: Create, update, delete Nodes.
